## Introduction

The development of this practice assessment document reflects the Health Professions Council Standards of Proficiency for Paramedics (2014). It also reflects the Joint Royal College Ambulance Liaison Committee (JRCALC) Clinical Practice Guidelines (2016) and the UK College of Paramedics (COP) Curriculum Guidance (Revised 2015).

Clinical practice and the development of knowledge and skill are at the centre of this assessment document. This Practice Assessment Document records the student's progression, in placement throughout the programme. It also provides information concerning the roles and responsibilities in the assessment process. Further information is also provided within the Student and Mentor Handbooks.

## Roles and Responsibilities

### 1. Student

- Ensure that the required assessments are undertaken with the practice placement educator
- Must present their practice assessment document on the first day and when requested to do so by their PPEd
- Must at all times maintain patient confidentiality in line with current guidance
- Ensure the safe keeping of their practice assessment document throughout their programme
- Must submit their practice assessment document using the designated university procedure on the date specified in the course handbook
- **Must attend placement in the allocated placement blocks to achieve the required hours: It is the student's responsibility to ensure they achieve the stated minimum of 750 hours**
- **Failure to attend placement during the allocated placement blocks will result in the student not passing practice**
- Conduct must be of a professional standard at all times.

### 2. Practice Placement Educator

- This role is fulfilled by an experienced paramedic
- Orientate the student to the placement area on the first day.
- Identify and provide access to learning opportunities and resources

- Assist the student to reflect on experiences to facilitate learning in and from practice
- Utilise developmental action plans to enhance the student's learning in identified areas
- Undertake required assessments and ensure that both the student and programme leader/ personal tutor are informed as soon as an issue arises
- To complete the appropriate sections of the practice assessment documentation
- To complete the **interpersonal skills profile** at the mid-point and at the end of each year. The PPEd should identify FIVE comments, which describe the performance of the student. It is the responsibility of the PPEd to comment upon the judgements made regarding the student's interpersonal skills. Together with the student, they will also develop a personal action plan to address identified weaknesses
- **The allocated PPEd is the only member of staff who can sign the SUMMATIVE ASSESSMENT**
- When the student has successfully passed the summative assessment to the standard required, the PPEd will sign the record of achievement for that year

- The student must hand in the completed document on the date set by the programme leader
- Conduct must be of a professional standard at all times.

### **3. Associate Practice Placement Educator**

- This role can be fulfilled by a Clinical Team Leader or experienced Paramedic
- Support the practice placement educator. Ensure that opportunities exist for the student's personal and professional development
- Assist in the assessment of the competence of a student undertaking a skill and completing the documentation if the student has achieved the required level of practice, AT FORMATIVE LEVEL ONLY
- Conduct must be of a professional standard at all times.

## The Assessment Process

### Placement period

- First year placements are primarily with the Ambulance Service
- The student **MUST ACHIEVE a minimum of 750** placement hours in the first year, but should aim for the allocated amount of 825 or more if possible

### Formative & summative assessment

- The student can be assessed formatively in any area, at any time.
- The student should have a minimum of one and a maximum of three formative assessments recorded for each element of practice
- The summative assessment does not necessarily have to be exposure to direct observation (see Skills Acquisition Section opposite)
- The practice placement educator who undertakes the summative assessment must record the result in the record of achievement
- **All the elements of practice must be assessed by the student and the practice placement educator, but the practice placement educator's decision will be considered as final.**

## Assessing the elements of practice

- Each element of practice will have a required level of practice. (See page 23 for criteria)
- In order to pass, the student must have achieved the level of practice criteria required for the element

### Skills Acquisition

Achievement of the outcomes is demonstrated through achievement of skills. Each skill can be achieved in a number of ways:

#### → Direct Observation

This means observing the student's performance directly.

#### → Simulation

This means observing the student's performance through skill simulation (e.g. use of a training manikin)

#### → Questioning

This means facilitating a discussion with the student and directly asking questions.

#### → Written work

This means examining other evidence produced by the student to demonstrate their achievement (e.g. a case study or reflection)

### Record of meetings

- The student must meet with their practice placement educator in order to ensure that the elements of practice are being achieved and to provide every opportunity for discussion and reflection
- Meeting dates must be negotiated and agreed within the first two days of each placement area. The content of these meetings and any additional meetings must be documented in the record of meetings.
- These should be used to note discussions and progression, plus any additional learning achieved
- Students and clinical staff need to document discussions and use the records actively
- **If at any point the practice placement educator is concerned that the student will not meet the required standard, then a developmental action plan should be used to help the student achieve the identified elements of practice**

### Passing/failing the Year

- **If the practice placement educator is concerned that the student may not achieve the elements of practice**

**within the document the programme leader must be contacted promptly in order to provide support.**

- If at any point the practice placement educator is concerned that the student will not meet the required standard, then a developmental action plan should be used to help the student achieve the identified elements of practice
- The student will have passed the practice element of the course if they have successfully achieved the summative assessments for ALL the elements of practice stated within the practice assessment document.
- If a student **has not passed** the practice assessment, it **must be** recorded in the record of achievement and the content of the discussions with the student leading up to this decision must be recorded in the record of meetings.

## Advice upon Presentation of Work in Your Portfolio

- The binder needs to be robust - A4 Binder – Lever arch file
- Provide a typed contents list
- Typing should utilise the same font size throughout – 12; and lines should be double spaced to allow room for marker's annotations.
- Typing should also use the same font throughout. Avoid using a mixture of different font styles
- Handwritten evidence should be avoided. Where it is unavoidable, it must be legible.
- The layout should follow a consistent pattern.
- The portfolio should be easy to navigate. Any reviewer being able to easily locate evidence from the contents list or through cross-referencing
- Use dividers to separate each section
- Clearly index each item
- Clearly label each item
- Each piece of evidence you are submitting should be numbered and cross-referenced against the appropriate element of practice (in the portfolio reference column)
- The purpose of each item of evidence should be clearly linked to the elements of practice
- Items must be easy to handle and read
- Only 2 items, back to back, in each clear pocket
- You are reminded that all documentation relating to individuals must be anonymised
- Should be typed and free from spelling and grammatical errors
- Where appropriate the portfolio must be fully referenced throughout using the Harvard referencing system adopted by UWE
- A reference and bibliography list must be appended to the work
- The references must reflect current thinking and research in the subject area and be within the period of 2006 – 2016. Older references used to support your work should be justified within the body of the text
- And finally

**Remember – the portfolio is a reflection of  
your professional ability....do yourself  
justice**

1. Unsafe to practice
2. Behaves in an unprofessional manner
3. Displays a negative attitude
4. Blames circumstances for difficulties encountered
5. Appears to lack motivation
6. Does not define learning needs
7. Lacks self-awareness an the effect of behaviour on others
8. Needs to take responsibility appropriate for this level
9. Lack of confidence inhibits effective performance
10. Needs more experience at this level
11. Reacts adversely to constructive criticism
12. Slow to settle
13. Lacks maturity
14. Needs to be more assertive
15. Could have made more use of available resources
16. Has not achieved full potential
17. Willing to try
18. Has developed in confidence
19. Skills will develop with practice

20. Assimilates new information
21. Accepts appropriate responsibility
22. Fits well into the team
23. Has a pleasant and approachable manner
24. Displays a mature attitude
25. Well motivated and adaptable
26. Is able to reflect on outcomes
27. Identifies own learning needs
28. Has made a useful contribution to the work of the team
29. Shows a good understanding of the concepts of paramedic care
30. Displays confidence
31. Analytical in approach, drawing from a wide range of sources
32. Offers informed and considered opinions
33. Realistically evaluates performance
34. Capable of informed decision-making
35. Shows a mature understanding
36. Valued team member who has gained respect
37. Innovative, develops fresh ideas
38. Consistently works at a higher level than expected
39. An excellent performer in all areas

## **AIRWAY AND VENTILATION TRAINING AUDIT**

A record of all airway management and ventilation practice including all simulation

## **MEDICATION AUDIT**

Student paramedics are permitted to administer the following drugs under the supervision of a registered paramedic, providing they have undertaken the relevant training for that medication:-

Oxygen  
Entonox  
Aspirin  
Glyceril Trinitrate  
Salbutamol  
Ipratropium Bromide  
Glucagon  
Adrenaline 1:1000  
Naloxone

3,000 words (+/- 10% tolerance).**

**“Emergency care is characterised by its diverse and unpredictable range of illness and injury and one of the attractions of the paramedic role is the limitless human and scientific knowledge that underpins practice”**

## **I.F.E.A.R. Reflection:**

### **An easy to use, adaptable template for paramedics**

**Reprinted from:** Smart, G. (2011) I.F.E.A.R. Reflection: An easy to use, adaptable template for paramedics. *Journal of Paramedic Practice* Vol. 3 No. 5

*“By three methods we may learn wisdom: first, by reflection, which is the noblest; second by imitation, which is the easiest; and third by experience, which is the bitterest (Confucius)*

#### **Abstract:**

Paramedics are required by the Health Professions Council, as a condition for maintaining their registration, to maintain high clinical standards and continuously engage in their own professional development. Similarly, student paramedics are required to provide a portfolio of evidence that demonstrates their development and eventual competency.

One means of engaging with this process is to apply a formal reflection process to emergency calls attended. Reflection is a hot-topic in paramedic education. However, it is known that for some, reflection can be daunting. Concerns about the academic process, writing and knowing where to begin are often articulated by students attending higher education programmes.

This article outlines a suggested reflective framework adapted from Gibb's (1985) reflective cycle. It outlines a series of applicable, sequential questions. Reflection is about using questions to retell a story; it's about answering these questions critically and, in so doing, often results in a well structured, reflective case-study; as well as improving one's own clinical understanding and practice.

In practice, we have found that both experienced practitioners and student paramedics have been able to use these steps to shape their writing. For those new to writing reflective case studies, the questions help to provide the muse for overcoming the 'blank-sheet-of-paper' inertia that can accompany portfolio building.

Paramedics practice in an environment of constant change. The combined factors of: an expanding scope of practice: increases in technology: advances in treatment and care and an extending evidence base, ensure that the paramedic is always kept busy.

It is a requirement of professional registration that the paramedic copes with these changes and their effects on practice and strives to continuously develop their professional knowledge, expertise and competence (HPC: 2010).

Society has the right and expectation that the professionals responsible for the immediate care of the acutely sick and injured are competent, knowledgeable and up-to-date. Maintenance of a record of continuous personal development and experience is mandatory for all health care professionals and there is a requirement for all registered paramedics to record these activities in a profile of evidence. Each year, a sample of randomly selected registrants is required to submit a CPD profile to the Health Professions Council for audit by CPD assessors (HPC: 2010).

The Council provide comprehensive information and advice concerning CPD, available through their website (<http://www.hpc-uk.org/registrants/cpd/standards>). This includes the five standards for CPD (Table 1) and it is an aspect of the second of these that this article seeks to address.

<b>Registrants (health professionals registered with the HPC) must:-</b>	
1.	Maintain a continuous, up-to-date and accurate record of their continuous professional development (CPD) activities
2.	Demonstrate that their <b>CPD activities</b> are a mixture of learning activities relevant to current or future practice
3.	Seek to ensure that their CPD has contributed to the quality of their practice and service delivery
4.	Seek to ensure that their CPD has contributed to the quality of their practice and service delivery
5.	Present a written profile containing evidence of their CPD upon request

**TABLE 1: HPC STANDARDS FOR CPD**

Learning can be said to result from exposure to an experience. However, it is not the exposure alone which results in learning. It is in the process of reflecting on that experience and responding to it that the real learning really takes place. Indeed, without reflection on an experience, a practitioner may be in danger of continuing to make the same errors (Schön, 1983). This is the difference between the paramedic with 20 year's experience and the paramedic with one year's experience, repeated 20 times.

For example; a student paramedic attending an emergency call to an elderly male who has fallen in the street; the placement-educator points out the shortening and rotation in the leg that indicates a classic presentation of a fractured neck-of-femur. The student will internalise this experience and bring this knowledge forward to the next occasion they see 'shortening and rotation' of a leg. Learning has taken place through 'pattern recognition'. How much richer though, is the learning that then takes place from the student reflecting upon that experience; considering what they currently know, opening their minds to gaps in their knowledge and then reacting to this by seeking further information; finding out that not all neck-of-femur fractures present with shortening and rotation; that they vary in the way they present; the many implications for the sufferer and the short and long term complications they might face. Reflection is about using questions to retell a story; it's about answering these questions critically and, in doing so, improving one's own clinical practice. Boud et al. (1985, 7) note, like Confucius, that experience alone is not sufficient for learning and pose the following questions: What is it that turns an experience into learning? What is it that specifically enables learners to gain the maximum benefit from the situations they find themselves in? How can they apply this experience in new contexts? They suggest that structured reflection is the key to learning from experience.

This ability to reflect upon clinical experiences opens the mind of the paramedic to a vast field of evidence based practice and medical knowledge. Emergency care is characterised by its diverse and unpredictable range of illness and injury and one of the attractions of the role is the limitless human and scientific knowledge that underpins practice.

There are many models for reflection, varying from the straightforward, through the puzzling and on to the very complex. Some have universal application and others are more focused on a profession/role. For an individual approaching formal reflection for the first time, the array of, sometimes conflicting, models can be quite bewildering.

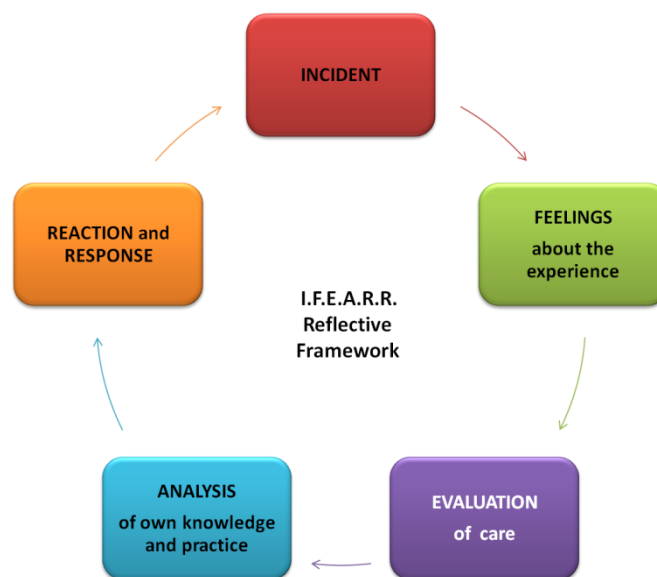

Utilising a pragmatic approach, the best way to choose a model is to find one that you are comfortable applying and confident that it will help you to translate your clinical experiences into knowledge and learning. As Gibbs (1988, 9) argues:

***"It is not enough just to do, and neither is it enough just to think. Nor is it enough simply to do and think. Learning from experience must involve linking the doing and the thinking."***

A model which utilises this approach has been developed for use by student paramedic scientists. The I.F.E.A.R. model (Fig.1) is an adaptation of Gibb's (1988) well known experiential learning cycle which itself was adapted from work by Kolb. According to Kolb (1984, 38) "*Learning is the process whereby knowledge is created through the transformation of experience*".

The expressive phrase, "*through the transformation of experience*", clarifies that merely being exposed to an event does not guarantee learning. The I.F.E.A.R. model encourages the practitioner to consider five stages. At each of these stages they will ask themselves some questions (Fig.2).

The first stage is describing the **incident**; the emergency call. This should outline why you were called, how the patient presented and details of your actions. This should not be overly descriptive but merely a summary of the clinical details.

**FIGURE 1: I.F.E.A.R. REFLECTION MODEL**

The second stage is **feelings**. Describe how you felt during the incident; how you felt immediately afterwards and how you feel now (upon reflection).

The third stage is the **evaluation** of care. Ask, did the patient have any unmet needs? Were they cared for and managed in a way that you would be happy to be treated?

(I.F.E.A.R.)  
**REFLECTIVE CASE STUDY TEMPLATE**

**Incident:**

1. Describe the incident; the emergency call
2. Describe your part in it
3. You might want to focus on a description of an experience that seems significant in some way

**Feelings:**

4. What were your feelings during the incident/call?
5. What were your feelings immediately afterwards?
6. What made you feel this way?
7. How do you now feel about this experience?

**Evaluation:**

8. What went well?
9. What didn't go so well?
10. What were the consequences of your actions on the patient and others?
11. Did the patient have any unmet needs (PUNs)?
12. To what extent did you act for the best and in tune with your values (ethics)?
13. Does this situation connect with any other similar experiences?

**Analysis:**

14. What did you learn from the incident or event?
15. What could you have done better?
16. Can you identify any practitioner (paramedic) educational needs (PENs)?
17. Was there anything you didn't know?

**Reaction:**

18. How will you meet the PENs?
19. Do you need to chat to a colleague or mentor?
20. Do you need to research something in books/journals?
21. Do you need to ask questions?
22. Do you need to read an article/book?
23. Do you need to attend a seminar/ session/course?
24. How might you respond more effectively given this situation again?

**Response:**

25. What did you find out in response to your reaction (educational needs)?
26. Describe your new learning
27. What can you take forward and apply if faced with the same or similar incidents?

**Apply New Learning**

**FIGURE 2: REFLECTIVE QUESTIONS**

The fourth stage is **analysing** your clinical knowledge, non-clinical knowledge, skill, or attitude. Did you feel you had a full understanding of the condition you were managing? What were the gaps in your knowledge or skill base? It is here that the *patient's unmet needs* (PUNs), identified in the evaluation, will direct the *paramedic's educational needs* (PENs).

Eve (2003), a General Practitioner first described '*PUNs and DENs*' (where the 'D' stands for Doctor)) and identified this as a means for enabling GP reflection. It readily adapts for paramedic use.

The fifth stage is your **reaction** and **response** to both the PUN and the PEN? Reaction is where you plan how you will address the missing clinical knowledge, non-clinical knowledge, skill, or attitude. Ask yourself 'what do I need to do to make things better for the next time?' It could be as simple as speaking to a work colleague or another healthcare professional; or that you need to research the information required from books or professional journals; if the educational need is substantial, you might need to attend a seminar or short course.

Finally, you can write about the things you have found out in **response** to your identified educational needs. It is here that you describe what you have learned and show how this new knowledge will transform your future practice.

This stage completes the cycle and you will be ready to practically apply this new knowledge, gained from *reflecting on experience*, at future emergency calls and **incidents**.

In practice, we have found that both experienced practitioners and student paramedics have been able to use these steps to shape their writing. For those new to writing reflective case studies, the questions help to provide the muse for overcoming the 'blank-sheet-of-paper' inertia that can accompany portfolio building.

# SECTION 11

## CRITICAL READING

### 40 Critical Reads should be included

**In which you provide a record of your reading during the course. As an advanced healthcare provided you will need to apply evidence based medicine and be as knowledgeable as you can about the care and treatment you provide.**

**Books, Journals and to a lesser extent, academic clinical internet sites**

#### **Scope and Depth**

At the commencement of the course we set out to encourage you to focus your reading. Reading is at the very centre of higher education, during your time at UWE you will do a tremendous amount of it. What you read is usually directed by:

1. The calls you attend and the subsequent thirst to be better informed about their condition
2. The lectures and applied practical sessions you attend; stimulating your hunger to go beyond the starting point of the lecture
3. Your knowledge of what you need to know, to get you where you need to be, to become an expert in pre-hospital emergency care

The advice has always been; “the wider you read, the more you can reference: the more you read, the better informed you will become”.

## Critical Reading Skills

There are 3,000 new medical papers published per day. Of these, only 45 are randomised control trials of new treatments. Over the last 30 years, published clinical trials have increased from 100 to 10,000 articles annually. The average university medical library will subscribe to around 2,300 journals.

How do we determine what we should read? How do we pick the wheat from all the chaff? READER is a suggested acronym to aid critical reading and to help in deciding what to read (Macauley: 1994).

- **Relevance:** Does the article deal with your area of practice? This can usually be gleaned from the title or abstract. If it is not to do with your practice it is unlikely to change what you do.
- **Education:** This is used in the context of behaviour modification – would it change what you do. Again this will be clear in the title or summary
- **Applicability:** Can the research be done in the reader's practice? It may be relevant to your practice and it may be that you would change what you do, but it is unachievable in your practice. For instance, a paper may look at the value of having a portable x-ray but for many services this would be impractical and unaffordable
- **Discrimination:** The message may be relevant, could change behaviour and be achievable, but is it valid? This really is down to the statistical quality of the paper.
- **Evaluation:** Okay, it's relevant, provokes change, is "do-able," and is epidemiologically sound, but what of the overall quality of the paper. Basically these systems score research very lowly if it is a descriptive case, higher if it is a trial, higher still if it is a large double-blind randomised control trial, and highest of all if it is a systematic review.
- **Reaction:** This is about how you should react to the paper. If it is a high quality, relevant, achievable change it should be shouted from the rooftops, meetings should be scheduled to promote it etc. If it is low quality, irrelevant, impossible to implement, and of no perceived benefit, *why did you read it in the first place!!!!!!*

Reading is at the very centre of higher education, during your time at UWE you should do a tremendous amount of it. The wider you read, the more you can reference: the more you read, the better informed you will become. Provided with this document is an example of a template to record and reflect upon your reading.

# **SECTION 12**

## **CALLS LOG**

**Where possible, these must be cross referenced to the elements of practice**

**(Section 6)**

**NOTE: PLEASE ENSURE ALL CLINICAL INFORMATION IS ANONYMISED**

## Section 12: Calls Log

In this section, please keep a record of the calls you are sent to. This replaces the requirement to collect and anonymise patient care records. The calls log will help you collect evidence to support the ELEMENTS OF PRACTICE. Provided below is an example of how you should record information in the calls log:-

### EXAMPLE

Date	Time	Type of Incident	Attend or observe	Your care and treatment	Elements of practice (cross referenced)
17/10/15	00.40	Breathing Difficulty 56 yrs. old male	Attend	<ul style="list-style-type: none"><li>• Gain consent</li><li>• Assess patient</li><li>• Carry chair and stretcher</li><li>• Oxygen therapy</li><li>• Nebulised Salbutamol</li></ul>	<ul style="list-style-type: none"><li>• EOP 5,6</li><li>• EOP 11, 12, 13</li><li>• EOP 2</li><li>• EOP 22</li><li>• EOP 25</li></ul>
